

Device and test engineer

Are you a physicist or EE wizard with an emphasis in semiconductor devices? VISIC Technologies is looking for a creative personality able to fit the position of Device and Test Engineer. This is an individual contributor position and duties will include the following:

- DC/analog measurements using scopes, curve tracers and other equipment
- Device final test development and support
- Measurement data collection and analysis
- New measurements setup development
- Device functionality testing
- Test program creation and sustaining
- Electronics and layout engineer support
- Remote support for testing vendors
- Device Layout DOE planning and analysis

You are best equipped for this position if you have:

- Basic knowledge in semiconductor manufacturing, semiconductor physics, DC measurements, SPC process control
- Basic knowledge in power device physics, reliability
- Knowledge in C or any other priming language
- Knowledge in PCB layout – advantage
- Ability to summarize and present data
- Team working ability

Typical Education & Experience

Preferred: Bachelor's Degree in Physics, EE, and 3+ years' work experience.
