

Test and Reliability Engineer

At a glance

Are you Electrical Components or EE wizard with an emphasis on reliability? VISIC Technologies is looking for a creative personality able to fit the position of Test and Reliability Engineer. This is an individual contributor position, and duties will include establishing test and measurement setups, test conduction, documentation, and reporting.

Job description

- Hands-on lab work
- Reliability test conduction and documentation
- Test equipment design
- Working with technology/device/reliability engineers in the creation of production test solutions that meet cost and performance requirements

You are best equipped for this position if you have:

- BSc. in Electrical or Electronic Engineering or five years relevant experience
- Test and Measurement setups including hardware and/or software experience
- Knowledge in configuration and usage of modern test equipment (DMM, Oscilloscope Signal acquisition equipment)
- Fluent communication skills in English.
